

Functional Requirement Document

Since there is no provided Business Requirement Document (BRD) with a "Coding Requirements" section, I'll create a hypothetical example based on a typical "Coding Requirements" section. Let's assume the "Coding Requirements" section is as follows:

"Coding Requirements:

- The system must allow users to create, read, update, and delete (CRUD) customer records.
- Customer records include name, email, phone number, and address.
- The system must validate email addresses to ensure they are correctly formatted.
- Users must be able to search for customers by name or email.
- The system must log all CRUD operations on customer records for auditing purposes."

Here's the detailed Functional Requirement Document (FRD) based on the provided template and the hypothetical "Coding Requirements" section:

Manage Customer Records

FR-CUS-001: Create Customer Record

Title: Create Customer Record

Description: The system must allow users to create new customer records with required details.

Preconditions:

- User is logged in and has necessary permissions.
- Required fields (name, email, phone number, address) are filled.

Main Flow / Functional Steps:

- User submits the new customer record form with required details.
- System validates the email address format.
- System checks for duplicate records based on email or other unique identifiers.
- System creates a new customer record.
- System logs the "Create" operation.

FR-CUS-002: Read Customer Record

Title: View Customer Record

Description: The system must allow users to view existing customer records.

Preconditions:

- User is logged in and has necessary permissions.
- Customer record exists.

Main Flow / Functional Steps:

- User searches or navigates to a customer record.
- System retrieves the customer record details.
- System displays the customer record details to the user.

FR-CUS-003: Update Customer Record

Title: Update Customer Record

Description: The system must allow users to update existing customer records.

Preconditions:

- User is logged in and has necessary permissions.
- Customer record exists.

Main Flow / Functional Steps:

- User edits the customer record details.
- System validates the updated email address format if changed.
- System updates the customer record.
- System logs the "Update" operation.

FR-CUS-004: Delete Customer Record

Title: Delete Customer Record

Description: The system must allow users to delete customer records.

Preconditions:

- User is logged in and has necessary permissions.
- Customer record exists.

Main Flow / Functional Steps:

- User initiates the deletion of a customer record.
- System prompts for confirmation.
- Upon confirmation, system deletes the customer record.
- System logs the "Delete" operation.

FR-CUS-005: Search Customer Records

Title: Search Customer Records

Description: The system must allow users to search for customer records by name or email.

Preconditions:

- User is logged in and has necessary permissions.

Main Flow / Functional Steps:

- User inputs search criteria (name or email).
- System retrieves matching customer records.
- System displays the list of matching customer records to the user.

FR-CUS-006: Validate Email Address

Title: Validate Email Address

Description: The system must validate the format of email addresses provided during customer record creation or update.

Preconditions:

- Email address is provided.

Main Flow / Functional Steps:

- System checks the email address against a predefined format or regular expression.
- If the format is incorrect, system displays an error message.

FR-CUS-007: Log CRUD Operations

Title: Log CRUD Operations on Customer Records

Description: The system must log all create, read, update, and delete operations performed on customer records.

Preconditions:

- CRUD operation is performed on a customer record.

Main Flow / Functional Steps:

- System captures details of the operation (operation type, user, timestamp).
- System stores the log entry in a secure audit log.
