

Functional Requirement Document

To create a detailed Functional Requirement Document (FRD) based on the provided Business Requirement Document (BRD), I'll need to focus on the "Coding Requirements" section. Since the actual BRD content isn't provided, I'll simulate the process with a hypothetical "Coding Requirements" section.

Let's assume the "Coding Requirements" section contains the following information:

- Coding Requirements:
- The system must allow users to create, edit, and delete customer profiles.
- Users should be able to assign multiple addresses and contact numbers to a customer.
- The system must validate email addresses and phone numbers for correctness.
- Upon saving a new customer profile, the system should send a welcome email to the customer's email address.

Using this information, I'll create a detailed FRD following the given template.

1. Requirement ID: FR-CRM-001

Title: Create Customer Profile

Description: The system allows users to create new customer profiles with the required details.

Preconditions:

- User is logged in and has the necessary permissions.
- The customer does not already exist in the system.

Main Flow / Functional Steps:

- User navigates to the "Create Customer Profile" page.
- User inputs required customer details (name, email, phone number, etc.).
- User can add multiple addresses and contact numbers for the customer.
- System validates the email address and phone numbers for correctness.
- Upon successful validation, the user saves the new customer profile.
- System checks for duplicate customer profiles based on unique identifiers (email, phone number, etc.).
- If no duplicates are found, the system creates the new customer profile.
- System sends a welcome email to the customer's email address.
- System displays a confirmation message to the user upon successful creation.

2. Requirement ID: FR-CRM-002

Title: Edit Customer Profile

Description: The system allows users to edit existing customer profiles.

Preconditions:

- User is logged in and has the necessary permissions.
- The customer profile exists in the system.

Main Flow / Functional Steps:

- User navigates to the "Edit Customer Profile" page for the selected customer.
- System retrieves and displays the current customer profile details.
- User edits the necessary customer details (name, email, phone number, etc.).
- User can add, edit, or delete addresses and contact numbers associated with the customer.
- System validates any changed email addresses and phone numbers for correctness.
- Upon successful validation, the user saves the changes to the customer profile.
- System updates the customer profile.
- System displays a confirmation message to the user upon successful update.

3. Requirement ID: FR-CRM-003

Title: Delete Customer Profile

Description: The system allows users to delete customer profiles.

Preconditions:

- User is logged in and has the necessary permissions.
- The customer profile exists in the system.

Main Flow / Functional Steps:

- User navigates to the "Customer Profiles" list or detail page.
- User selects the customer profile to be deleted.
- System prompts the user to confirm the deletion.
- Upon confirmation, the system checks for any dependencies or restrictions on deleting the customer profile.
- If no restrictions are found, the system deletes the customer profile and associated data (addresses, contact numbers, etc.).
- System displays a confirmation message to the user upon successful deletion.

4. Requirement ID: FR-CRM-004

Title: Validate Customer Contact Information

Description: The system validates customer email addresses and phone numbers for correctness upon creating or editing a customer profile.

Preconditions:

- Email address or phone number is entered during customer profile creation or editing.

Main Flow / Functional Steps:

- System checks the format of the entered email address for validity (e.g., presence of "@" and ".com"/".org"/etc.).
- System checks the format of the entered phone number for validity (e.g., correct number of digits, valid country code if applicable).
- If the email or phone number is invalid, the system displays an error message to the user.
- If the email or phone number is valid, the system proceeds with the creation or update process.

5. Requirement ID: FR-CRM-005

Title: Send Welcome Email to New Customer

Description: The system sends a welcome email to the customer's email address upon successful creation of a new customer profile.

Preconditions:

- New customer profile is successfully created.
- Customer has a valid email address.

Main Flow / Functional Steps:

- System generates a welcome email using a predefined template.
- System populates the email with relevant customer information (name, etc.).
- System sends the welcome email to the customer's email address.
- System logs the email sending activity for tracking and debugging purposes.
